8.2 Exposure controls

Appropriate engineering controls

Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits.

Individual protection measures, such as personal protective equipment (PPE)

Eye/face protection : Eye protection such as chemical splash goggles and/or face shield must be worn when possibility exists for eye contact due to splashing or spraying liquid, airborne particles, or vapor.
The selected goggles or glasses must satisfy the European norm standard EN 166.

Hand protection

Remarks : Wear chemical resistant gloves such as: Glove material fluoroelastomer; material thickness 0.4 mm; break through time $\geq$ 480 min. Gloves must be replaced after 8 hours of wear. The selected protective gloves have to satisfy the standard EN 374 derived from it. The suitability for a specific workplace should be discussed with the producers of the protective gloves. Gloves should be discarded and replaced if there is any indication of degradation or chemical breakthrough.

Skin and body protection : When skin contact is possible, protective clothing including gloves, apron, sleeves, boots, head and face protection should be worn.
Depending on risk assessment, the selected protective clothing must satisfy EU standard EN 13034, which describes clothing offering limited 8-hour protection against splashes, or, EU standard EN 14605, which describes liquid- or spray-tight clothing.
Choose body protection according to the amount and concentration of the dangerous substance at the work place.
Use PPE that is chemical resistant to the product and prevents skin contact.
Fire retardant and anti-static clothing is appropriate for routine occupational use.

Respiratory protection : If engineering controls do not maintain airborne concentrations to a level which is adequate to protect worker health, select respiratory protection equipment suitable for the specific conditions of use.
Check with respiratory protective equipment suppliers.
Where air-filtering respirators are unsuitable (e.g. airborne
